Workshop Outline for Beyond the Basics of Spreadsheets Microsoft Excel

Objectives.....	3
Working with Comments	4
Conditional Formatting	5
If Statements.....	7
Linked Workbooks	10
Working with Headers & Footers	11
Charts	12
Sorting Lists	13
Creating a Mailing List or Labels	14
Excel Shortcuts.....	18

Beyond the Basics of Creating Spreadsheets

Learn how to use comments, create conditional formatting, work with IF statements, link workbooks, insert headers & footers, sort lists, do more with charts, and create mailing lists.

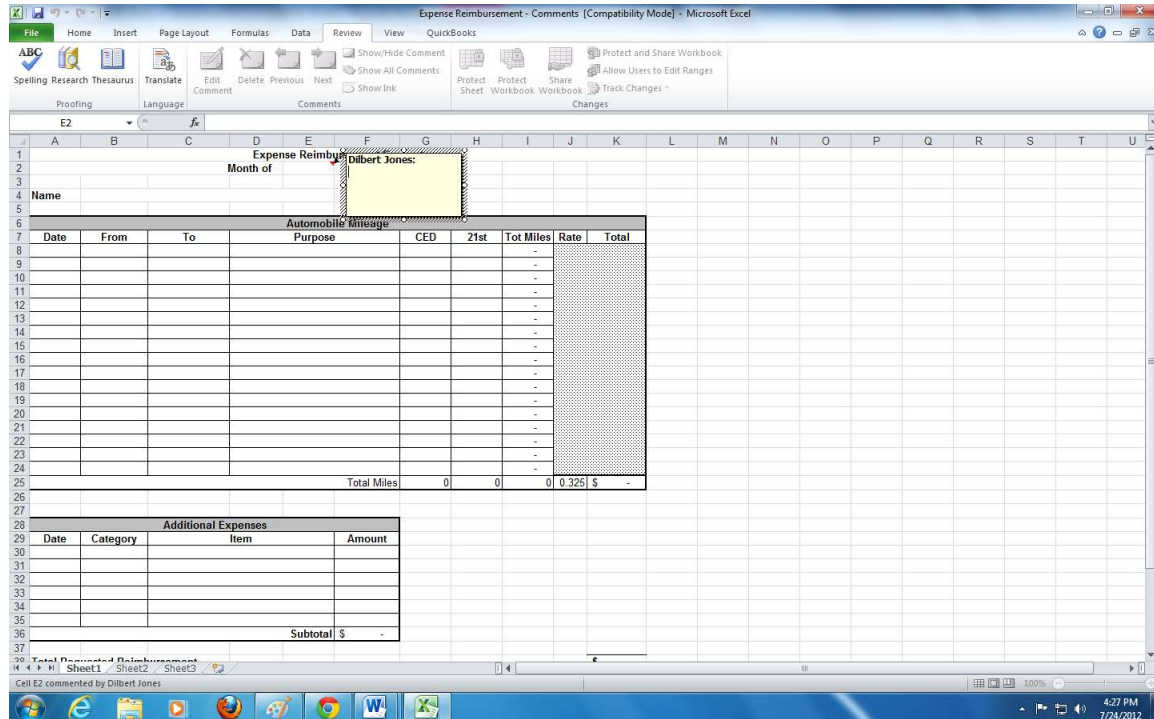

Objectives

- Learn how to use comments
- Create conditional formatting
- Work with IF statements
- Learn how to link workbooks
- Work with headers & footers
- Use a chart as a graphic example
- Sort and filter information
- Create a mailing list or labels

Working with Comments

Comments allow you to make insert notes to yourself or other on-line users regarding instructions or comments regarding the cell or currently displayed information. This can be used to remind yourself how you came up with a budget number (works great when you only create budgets once per year and can't remember where you got a number).

OPEN EXPENSE REIMBURSEMENT – COMMENTS

To create a Comment:

- ◆ Select Cell you want the comment to appear in
- ◆ Click on the “Review” Tab on the Ribbon
- ◆ Select “New Comment”.
- ◆ The comment will begin with your “User Name” (from Office Button > Excel Options > Popular)
- ◆ Type in your comment
- ◆ Click out of comment when finished
- ◆ Comment is indicated by a red triangle in the upper right-hand corner of the cell

To view the comment:

- ◆ Hover the selection tool over the cell that contains the comment-Comment appears

Or to view all comments:

- ◆ Click on the “Show All Comments” Button on the “Review” tab of the Ribbon
- ◆ Use the buttons in the Comments section of the Review tab to edit, move through comments, hide all, or delete comments

To turn off viewing all comments:

- ◆ Click on “Show All Comments” button on the Review Tab of the Ribbon to view all the comments or turn off viewing the comments.

To edit a comment:

- ◆ Select the cell that contains the comment
- ◆ Click on the “Review” Tab select “Edit Comment”

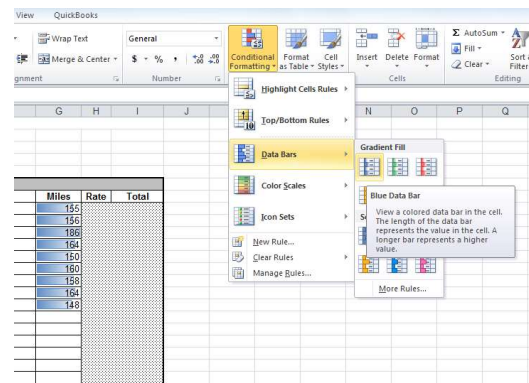

Conditional Formatting

Conditional formatting will allow you to create formatting that will automatically change depending upon the information that appears in a cell. This is useful to provide you with a visual reflection of when a number exceeds or falls below a given amount.

OPEN EXPENSE REIMBURSEMENT – CONDITIONAL FORMATTING

To create conditional formatting:

- ◆ Select the cell or range of cells that you want the formatting to appear in. (Column G)
- ◆ Click on the “Home” Tab, Select Conditional Formatting in the Styles section.
- ◆ A gallery appears on the many different types of Conditional Formatting that are available. Look through the options of Data Bars, Color Scales, and Icon Sets.

Change or adjust the rules of the Conditional:

- ◆ Click the Conditional Formatting button and go to the “Manage Rules...” Menu Item
- ◆ Use the Edit Rule... button to change how the format behaves (color or style)
- ◆ Click on OK – Click on OK again.

Add in additional Conditions

What if we want the highest mileage to be red and the lowest mileage to be green. We can add additional rules.

- ◆ Click the Conditional Formatting button and go to the “Manage Rules...” Menu Item
- ◆ Click on New Rule...
- ◆ Select “Format only top or bottom ranked values”
- ◆ Change the 10 to a 1 and select the Format... button
- ◆ Change the Font style to Bold and the Fill to Red
- ◆ Do the same thing for the Bottom 1 making it Bold and Green. The Rules manager should look like below.
- ◆ The “Stop if True” says no additional formatting will occur to the cells that already match this condition.
- ◆ The Order from Top to Bottom is how the rules are applied. If they are not in the correct order, use the blue button at the top to adjust the rules placement.

To delete conditional formatting:

- ◆ Select the rule to be deleted in the Conditional Formatting Rules Manager
- ◆ Select “Delete Rule”

Time Saving Tip to Remember:

Entering Simple formulas:

Using one operator:

Select a cell and Type =8+4, Click on the Checkmark on the formula bar or hit the Enter Key the result is 12

Using two operators:

Select a cell and Type =4+2*3, hit Enter, the result is 10

Key factor: Order of Operator Precedence - multiple and division are completed before adding and subtracting in a formula, unless you use parentheses to override the precedence.

Select a cell and Type =(4+2)*3, hit Enter, the result is 18

If Statements

IF return a value if one condition is TRUE and returns another value if the condition is FALSE. The IF function is one of the most commonly used logical functions and can be embedded within itself to perform up to seven logical tests. IF statements can be used to track grades, calculate shipping costs, etc.

OPEN THE FILE “IF EXAMPLES”

To create a single IF Function:

- ◆ Select the cell you want the statement to appear in
- ◆ Choose the *fx* from the Formula Bar
- ◆ Choose “Select a function”, “IF” from the right hand side of “Most Recently Used” “Function category”
- ◆ Click on OK
- ◆ Move the IF box so you can see the section of the spreadsheet you are working on
- ◆ In logical test text box, select cell you want to test (click on the actual cell in the spreadsheet)
- ◆ In this example, type in a “=PASS”
- ◆ Tab or click in “Value if true” text box, type in that value
- ◆ Tab or click in “Value if false text box, type in that value

PASS/FAIL	PASS/FAIL	RESULT
JOHN	PASS	GRADE 7
BILL	PASS	
PATRICK	FAIL	
ANDY	FAIL	
CHRIS	PASS	

(Return A Result If There Is A Condition)

PROJECT	DATE	COST	CUMULATIVE TOTAL
RIDGE CREEK	1/15/00	\$ 92,000	\$
RIDGE CREEK	1/22/00	\$ 87,000	
RIDGE CREEK	1/29/00	\$ 75,000	
RIDGE CREEK	2/5/00	\$ 72,000	
RIDGE CREEK	2/12/00	\$ -	

Logical_test: C3="PASS" = TRUE

Value_if_true: "GRADE 7" = "GRADE 7"

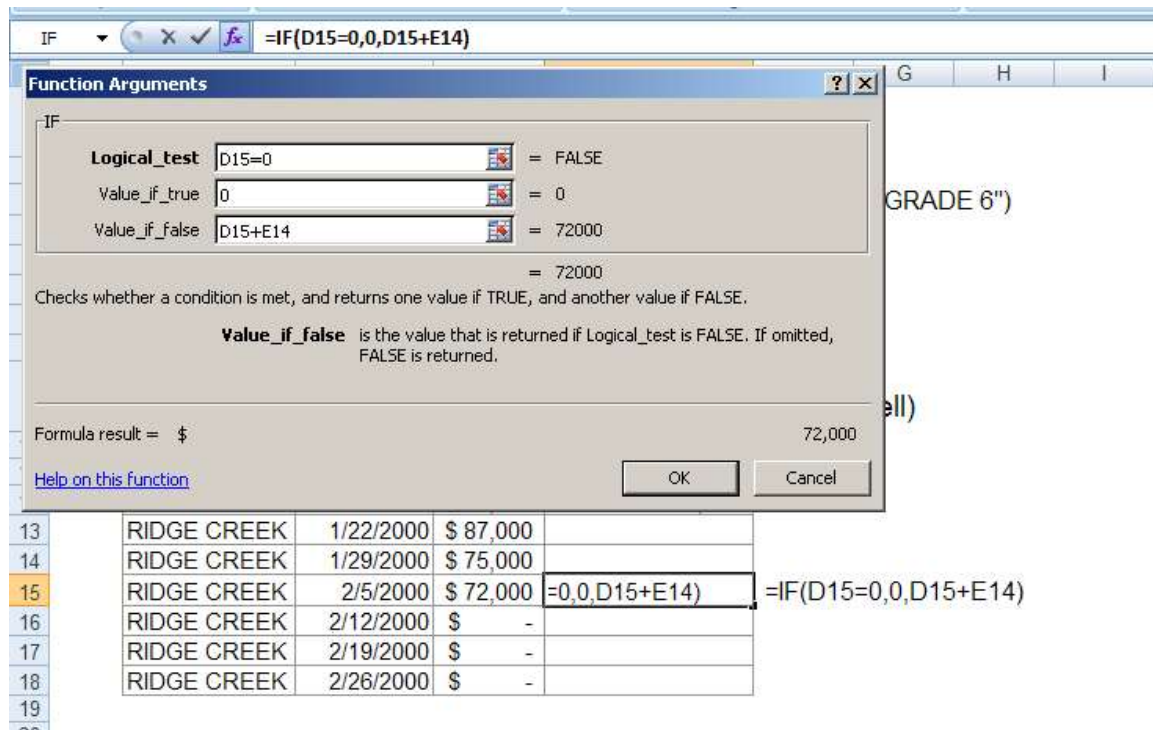

Value_if_false: "GRADE 6" = "GRADE 6"

Formula result: =GRADE 7

OK Cancel

A	B C D			
	PASS/FAIL	PASS/FAIL	RESULT	
2				
3	JOHN	PASS	GRADE 7	=IF(C3="PASS","GRADE 7","GRADE 6")
4	BILL	PASS	GRADE 7	
5	PATRICK	FAIL	GRADE 6	
6	ANDY	FAIL	GRADE 6	
7	CHRIS	PASS	GRADE 7	

To create a single IF Function where there's a number in the cell:

The screenshot shows the Excel IF function dialog box. The Logical_test is D15=0, Value_if_true is 0, and Value_if_false is D15+E14. The formula result is \$72,000. The spreadsheet below shows a table with columns for Project, Date, Cost, and Cumulative Cost. Row 15 is highlighted, showing 'RIDGE CREEK' with a cost of \$72,000 and a cumulative cost of \$72,000. The formula bar shows =IF(D15=0,0,D15+E14).

	A	B	C	D
	PROJECT	DATE	COST	CUMULATIVE COST
13	RIDGE CREEK	1/22/2000	\$ 87,000	
14	RIDGE CREEK	1/29/2000	\$ 75,000	
15	RIDGE CREEK	2/5/2000	\$ 72,000	=IF(D15=0,0,D15+E14)
16	RIDGE CREEK	2/12/2000	\$ -	
17	RIDGE CREEK	2/19/2000	\$ -	
18	RIDGE CREEK	2/26/2000	\$ -	
19				

IF (Return A Result If There's A Number In The Cell)

A	B	C	D	
PROJECT	DATE	COST	CUMULATIVE COST	
RIDGE CREEK	1/15/00	\$ 92,000	\$ 92,000	=IF(D12=0,0,D12)
RIDGE CREEK	1/22/00	\$ 87,000	\$ 179,000	=IF(D13=0,0,D13+E12)
RIDGE CREEK	1/29/00	\$ 75,000	\$ 254,000	
RIDGE CREEK	2/5/00	\$ 72,000	\$ 326,000	=IF(D15=0,0,D15+E14)
RIDGE CREEK	2/12/00	\$ -	\$ -	
RIDGE CREEK	2/19/00	\$ -	\$ -	
RIDGE CREEK	2/26/00	\$ -	\$ -	

To create a nested IF statement:

When your cursor is in the first “Value if false” text box, click on the IF from the dropdown menu on the formula bar and continue entering if statements until all embedded statements are entered.

NESTED IF (Automate Grades)

	B	C	D
23	NAME	AVG. SCORE	GRADE
24	John	92	A
25	Andy	87	B
26	Sandy	75	C
27	Bill	72	C
28	Al	65	D
29	Albert	61	D
30	Mitch	58	F

=IF(C24>88,"A",IF(C24>79,"B",IF(C24>69,"C",IF(C24>59,"D",
"F")))))

Grade Key:

A = 89-100

B = 80-88

C = 70-79

D = 69-60

F = 59-below

Linked Workbooks

This is used when there is more than one workbook involved and the information needs to be linking into another spreadsheet. For example, if 3 different departments have budget information and you need to create a budget from all 3.

>OPEN>LINKING – SUMMARY, LINKING – DEPT A, LINKING – DEPT B, LINKING – DEPT C

- ◆ Open all of the workbooks that need to be linked (make sure only those 4 are open)
- ◆ Click on the “View” Tab.
- ◆ Select the “Arrange All” button in the Window Section.
- ◆ Select Tiled
- ◆ Click on OK

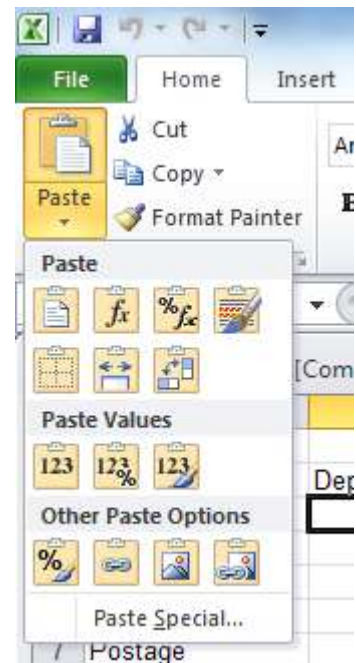

The screenshot displays four Excel workbooks arranged in a tiled view. The 'View' tab is selected in the ribbon, and the 'Arrange All' button is highlighted. The workbooks are:

- Linking - Summary [Compatibility Mode]**: Contains a summary table with columns A-H and rows 1-15. It lists departments (Dept A, Dept B, Dept C) and their respective budget items (Wages, Payroll Taxes, Benefits, Office Supplies, Postage, Total).
- Linking - Dept B [Compatibility Mode]**: Contains a table with columns A-J and rows 1-15. It lists budget items (Wages, Payroll Taxes, Benefits, Office Supplies, Postage, Total) and their values for months Jul-00 through Dec-00.
- Linking - Dept C [Compatibility Mode]**: Contains a table with columns A-J and rows 1-15. It lists budget items (Wages, Payroll Taxes, Benefits, Office Supplies, Postage, Total) and their values for months Jul-00 through Dec-00.
- Linking - Dept A [Compatibility Mode]**: Contains a table with columns E-N and rows 1-15. It lists budget items (Wages, Payroll Taxes, Benefits, Office Supplies, Postage, Total) and their values for months Oct-00 through Dec-00.

◆ Creating the link

- Select the range of cells from Dept. A that represent the totals for Wages thru Postage.
- Copy the cells
- Click in the Summary Worksheet and click in B3
- Click on the “Paste” Dropdown on the Home Tab and select “Paste Link”
- Repeat for Dept’s B and C

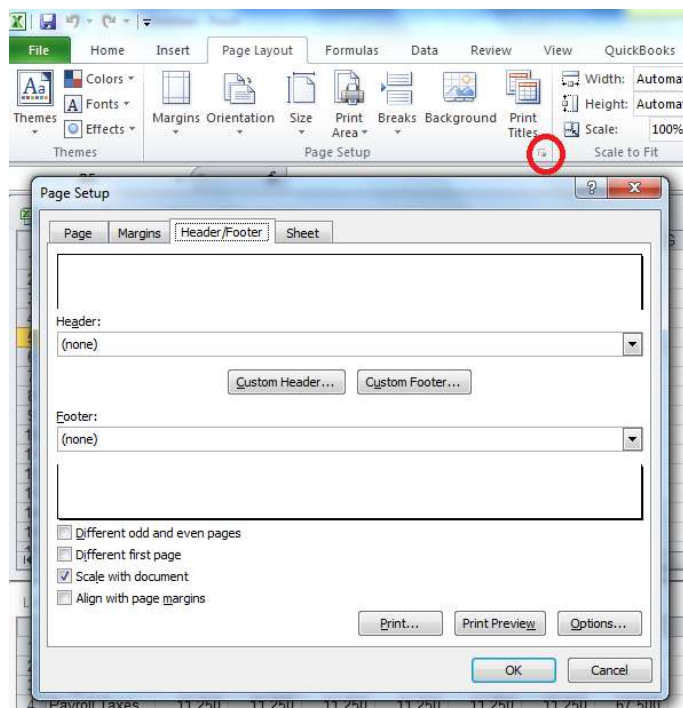

Dept A	Dept B	Dept C	Totals
200,000	300,000	450,000	950,000
30,000	45,000	67,500	142,500
20,000	30,000	45,000	95,000
3,000	4,500	6,000	13,500
1,500	3,000	4,500	9,000
254,500	382,500	573,000	1,210,000

Working with Headers & Footers

You can add Headers and Footers to Workbooks or to different Sheets within a Workbook.

- ◆ Click on the “Page Layout” tab on the ribbon
- ◆ Select on the Fly-out button in Sheet Options
- ◆ Choose predefined Headers and Footers from the dropdown menus
- ◆ Create your own Headers and Footers from the “Custom Header” or “Custom Footer” buttons

Charts

>OPEN>MORE CHARTS

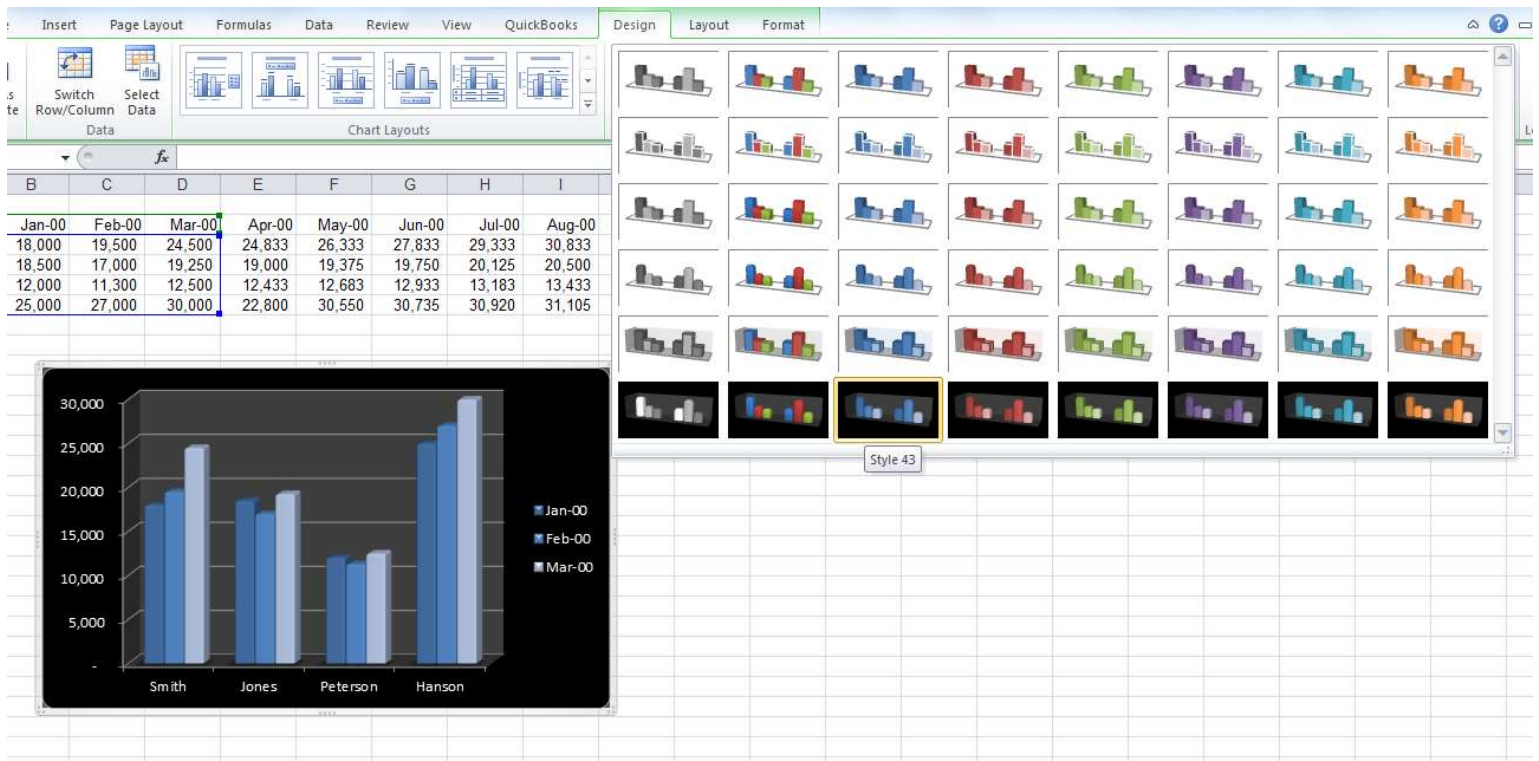

Changing existing charts:

The following changes can be made to Y Axis, for example:

- ◆ Patterns
- ◆ Scale
- ◆ Font
- ◆ Number
- ◆ Alignment

Double click on the area that needs to be changed, and from the dialog box, select option.

Change the design easily using the Gallery in the Chart Tools

Sorting Lists

You can sort and filter information in Excel by creating a table. There are a few rules to follow. Make sure you have a Blank row at the end of the table. DO NOT leave a blank row after the column headings and before the data. DO leave a blank row after all the records and before any totals. Each column must have a field name (label at the top of the data indicating the contents of that column) and it must be unique.

>OPEN>SORTING LISTS

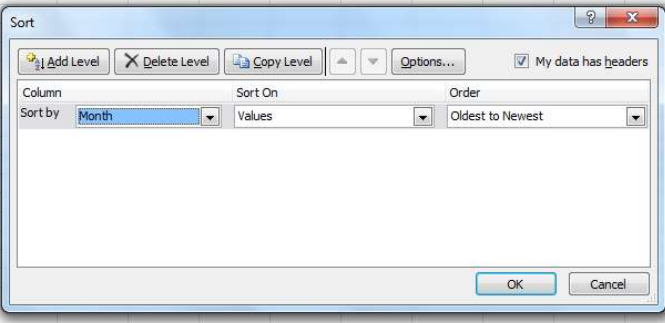

To sort in a list by one item:

- ◆ Click into a cell in the table in the column you first want to sort on
- ◆ On the Home Tab of the Ribbon, in the Editing Section, click on “Sort & Filter”

To sort in a list by multiple items:

- ◆ Click into a cell in the table you want to sort
- ◆ Click on the dropdown on the “Sort & Filter” icon and select “Custom Sort”
- ◆ In the drop down, select on the column to sort on and order
- ◆ Click on “Add Level” to sort on additional columns.
- ◆ Click on OK

Month	County	Type	Quantity	Bundles
April-00	St. Louis	White Pine	37,000	74
April-00	Itasca	Blue Spruce	22,500	45
April-00	Itasca	White Pine	15,500	31
April-00	Itasca	Concolor Fir	13,500	27
April-00	St. Louis	Blue Spruce	15,000	25
April-00	Itasca	Scotch Pine	15,000	22
April-00	St. Louis	Frazier Fir	6,500	13
May-00	Itasca	Blue Spruce	42,500	85
May-00	Lake	White Pine	32,000	64
May-00	Lake	Frazier Fir	14,500	29
May-00	Lake	Blue Spruce	13,500	27
May-00	Cook	Concolor Fir	12,000	24
May-00	Cook	Concolor Fir	10,000	20
September-00	Lake	Frazier Fir	7,500	15
September-00	Lake	Blue Spruce	3,100	62
September-00	St. Louis	White Pine	26,500	53

To filter contents:

- ◆ Select any cell in the table
- ◆ Click on the dropdown on the “Sort & Filter” icon and select “Filter”
- ◆ Click on any dropdown arrow for the field you want to use to filter and choose a filter from the criteria dropdown list.
- ◆ To see all records again, reset all filter criteria to “all”

4	Month	Count	Type	Quantit	Bundle
5	April-00	St. Louis	White Pine	37,000	74
7	April-00	Itasca	White Pine	15,500	31
13	May-00	Lake	White Pine	32,000	64
20	September-00	St. Louis	White Pine	26,500	53
21					
22	Totals			280,100	616
23					

Subtotals

You can automatically calculate subtotals and grand totals in a list for a column by using the **Subtotal** command.

IMPORTANT:

The **Subtotal** command will appear grayed out if you are working with a Microsoft Excel table. To add subtotals in a table, you must first convert the table to a normal range of data, and then add the subtotal. Note that this will remove all table functionality from the data except table formatting.

When you insert subtotals:

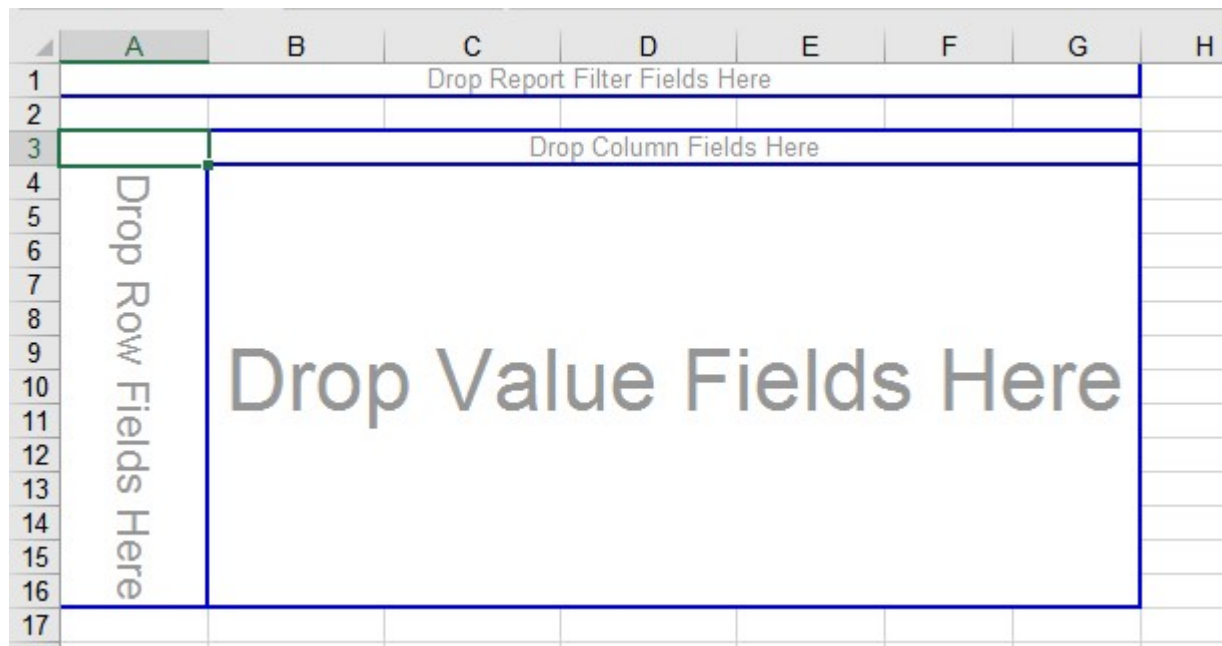

- **Subtotals** are calculated with a summary function, such as **Sum** or **Average**, by using the SUBTOTAL function. You can display more than one type of summary function for each column.
- **Grand totals** are derived from detail data, not from the values in the subtotals. For example, if you use the **Average** summary function, the grand total row displays an average of all of the detail rows in the list, not an average of the values in the subtotal rows.

1	2	3		A	B
				1	Sport Sales
				2	Golf \$5,000
				3	Golf \$2,000
				4	Golf \$1,500
				5	Golf Total \$8,500
				6	Safari \$9,000
				7	Safari \$4,000
				8	Safari Total \$13,000
				11	Tennis Total \$2,000
				12	Grand Total \$23,500

If the workbook is set to automatically calculate formulas, the **Subtotal** command recalculates subtotal and grand total values automatically as you edit the detail data. The **Subtotal** command also outlines the list so that you can display and hide the detail rows for each subtotal.

Create a PivotTable

If you have limited experience with PivotTables, or are not sure how to get started, a **Recommended PivotTable** is a good choice. When you use this feature, Excel determines a meaningful layout by matching the data with the most suitable areas in the PivotTable. This helps give you a starting point for additional experimentation. After a recommended PivotTable is created, you can explore different orientations and rearrange fields to achieve your specific results. The Recommended PivotTables feature was added in Excel 2013.

	A	B	C	D	E	F	G	H
1	Month	(All) ▼						
2								
3	Sum of Quantity	Type ▼						
4	County ▼	Blue Spruce	Concolor Fir	Frazier Fir	Scotch Pine	White Pine	Grand Total	
5	Cook		22000				22000	
6	Itasca	65000	13500		15000	15500	109000	
7	Lake	16600		22000		32000	70600	
8	St. Louis	15000		6500		63500	85000	
9	Grand Total	96600	35500	28500	15000	111000	286600	
10								

In the **Field Name** area at the top, select the check box for any field you want to add to your PivotTable. By default, non-numeric fields are added to the **Row** area, date and time fields are added to the **Column** area, and numeric fields are added to the **Values** area. You can also manually drag-and-drop any available item into any of the PivotTable fields, or if you no longer want an item in your PivotTable, simply drag it out of the Fields list or uncheck it. Being able to

Creating a Mailing List or Labels

You can use this procedure to create form letters, mailing labels, and other merged documents by merging a list of data with a Word document. You must create the list before you perform this procedure in Word. The list must include column labels and contain no blank rows.

In the Microsoft Word program, use the Letters and Mailings command from the Tools menu or use the Other Task Pane option to locate Mail Merge. Follow the steps in the Wizard.

Step One: What do you want to do?

- Letter
- E-mail
- Envelope
- Label
- Directory

Step Two: Select Document

- Current
- Template
- Existing Document

OPEN Document *Merge Letter*

August 21, 2012

Dear

Congratulations, you have been selected as this year's winner. You will receive a free 10 day trip to the Bahamas. This trip includes airfare from Duluth, four star hotel accommodations, a chauffeured limousine and all meals and \$10,000 spending money.

Microsoft® Excel – Beyond the Basics of Spreadsheets

Sincerely,

Ima Rich, President, Winning Travel

Step Three: Select Recipients (Browse to locate file Mailing list for Excel)
